3		Faculty of Information Technology	English	Mandatory	None

SWS	Classroom	Self Study	Total Workload	ECTS
2h	16h	16h	32h	2

<p>Learning Outcomes / Competences</p> <ul style="list-style-type: none"> This course will focus on 2 (two) perspectives, such as computer ethics, that study and explore the issues that arise from computer technology and internet, and cyber law, as a term that encapsulates the legal issues related to the use of digital media, such as internet. Student should study the controversies and alternative points of view, such as privacy vs access to information, privacy vs law enforcement, freedom of speech vs control of content on the Net, pros and cons of offshoring jobs, market-based vs regulatory solutions, and so on. Some controversial aspects may go into the law and students should analyze and understand the regulation and limit of the actions on the cyber media. <p>The Specific Course Objectives are:</p> <ol style="list-style-type: none"> To understand the intellectual property aspect. To understand the privacy aspect. To explore the freedom of speech and potential impact to the society To explore and analyze cyber crime and dangerous impact to the world To explore the computer and internet technology impact to the global work environment To understand the cyber law and explore some hot issues around To leverage the awareness of impact of computer and internet technology <p>Course Contents</p> <ol style="list-style-type: none"> Introduction to Computer Ethics and some issue Privacy and computer technology Changing communication paradigms Intellectual property and changing technology Cyber crime
--

6. The impact of internet technology to the employment
7. Cyber law exploration and some case studies

Course Presentation

Sharing material, article, and group discussion

Media

Textbooks, White/black boards,
Beamer, Laptop
